

The Problem

Old-fashioned heating appliances are inefficient and emit high level of particle pollutions

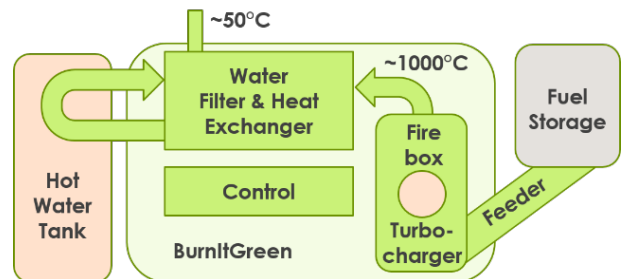

The Solution

The easy incorporation with existing heating systems and variety of fuel sources allows the households to burn the fuel they are used to, but safe for the environment while reducing their fuel costs.

The Technology

Boiler assembly including high temperature combustion chamber and detached water based heat exchanger

Value Proposition

More efficient and much cleaner than wood and pellets stoves

Up to 99.5 % less harmful emissions

Market

Bulgaria - 1 000 000 customers
EU – 20 000 000 customers
World Wide – 250 000 000 customers
